DETAILED ACTION

Allowable Subject Matter

Claims 1, 4-11 and 14-22 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or suggest the claimed methods.

The closest prior art of record is *Costanza* (USPN 4,003,871). *Costanza* teaches a process for preparing an aqueous polymer dispersion by a free radical initiator process. Cited Example 3 in *Costanza* shows a continuous metering of water, oil-soluble free radical initiator (benzoyl peroxide), dispersant (sodium lauryl sulfate), water soluble initiator (potassium persulfate) and monomer (styrene) to a reaction vessel, and heating the vessel to an end temperature (50°C). These components are continuously fed into the reactor (adding the pre-emulsion in Example 3 over the course of two hours); therefore claim elements a-c are being metered into the reaction vessel at all points in the claimed process. The difference between *Costanza* and the instant claimed invention is that *Costanza* is silent regarding the necessity of heating the reaction to T_E such that the half-lives of the initiators are within the claimed limits. The Board has reached the conclusion that *Costanza* does not provide sufficient motivation for selecting the claimed initiators and reaction temperature based on the initiator half-lives. The art of record does not teach or suggest that a person having ordinary skill in the art would have motivation to art to select the initiators and control the starting and ending temperatures in the invention of *Costanza* within applicant's claimed limits, such

that the water-soluble free radical initiator initiates a polymerization at temperature T_s and the oil-soluble free radical initiator has a half-life of ≥ 10 hours at the starting reaction temperature T_s and a half-life of ≤ 5 hours at the end reaction temperature T_E .
